(C) defeat

(D) defeatist

## Q. 6 - Q. 10 carry two marks each.

Q.6 Since the last one year, after a 125 basis point reduction in repo rate by the Reserve Bank of India, banking institutions have been making a demand to reduce interest rates on small saving schemes. Finally, the government announced yesterday a reduction in interest rates on small saving schemes to bring them on par with fixed deposit interest rates.

Which one of the following statements can be inferred from the given passage?

- (A) Whenever the Reserve Bank of India reduces the repo rate, the interest rates on small saving schemes are also reduced
- (B) Interest rates on small saving schemes are always maintained on par with fixed deposit interest rates
- (C) The government sometimes takes into consideration the demands of banking institutions before reducing the interest rates on small saving schemes
- (D)A reduction in interest rates on small saving schemes follow only after a reduction in reporate by the Reserve Bank of India
- Q.7 In a country of 1400 million population, 70% own mobile phones. Among the mobile phone owners, only 294 million access the Internet. Among these Internet users, only half buy goods from e-commerce portals. What is the percentage of these buyers in the country?
  - (A) 10.50 (B) 14.70 (C) 15.00 (D) 50.00
- Q.8 The nomenclature of Hindustani music has changed over the centuries. Since the medieval period dhrupad styles were identified as baanis. Terms like gayaki and baaj were used to refer to vocal and instrumental styles, respectively. With the institutionalization of music education the term gharana became acceptable. Gharana originally referred to hereditary musicians from a particular lineage, including disciples and grand disciples.

Which one of the following pairings is NOT correct?

(A)	dhrupad, baani
(B)	gayaki, vocal
(C)	baaj, institution
(D)	gharana, lineag

Q.9 Two trains started at 7AM from the same point. The first train travelled north at a speed of 80km/h and the second train travelled south at a speed of 100 km/h. The time at which they were 540 km apart is \_\_\_\_\_ AM.

(A) 9 (B) 10 (C) 11 (D) 11.30

Q.10 "I read somewhere that in ancient times the prestige of a kingdom depended upon the number of taxes that it was able to levy on its people. It was very much like the prestige of a head-hunter in his own community."

Based on the paragraph above, the prestige of a head-hunter depended upon

- (A) the prestige of the kingdom
- (B) the prestige of the heads
- (C) the number of taxes he could levy
- (D) the number of heads he could gather

Q.38 Water is flowing at a velocity of 1.6 m s<sup>-1</sup> in a pipe of diameter 8 cm and length 100 m. Assuming the value of coefficient of friction for pipe, f = 0.005 and acceleration due to gravity, g = 9.81 m s<sup>-2</sup>, the head loss (in meter) due to friction in the pipe is

- (A) 1.28
- (B) 2.28
- (C) 2.78
- (D) 3.26

Q.39 A cream separator has discharge radii of 6 cm and 9 cm and the density of cream and skim milk are 860 and 1035 kg m<sup>3</sup>, respectively. The ideal radius (in meter) for placing the feed inlet is

- (A) 0.085
- (B) 0.098
- (C) 0.113
- (D) 0.174

Q.40 Head rice contents in the samples collected at feed inlet, head rice outlet and broken rice outlet of an indented cylinder grader are 82%, 94% and 15%, respectively. If the grader receives the feed at 1200 kg h<sup>-1</sup>, the flow rate (in kg h<sup>-1</sup>) of head rice in the broken rice stream is

- (A) 20.17
- (B) 27.34
- (C) 182.28
- (D) 1017.72

Q.41 A batch of 100 kg grain at 32% moisture content (wet basis) is being dried using hot air at 70 °C and 30% RH. The values of Henderson equation's constants c and n for the grain are 8.5×10<sup>-6</sup> and 2.07, respectively. Considering the maximum possible drying of the batch, the quantity of moisture removed in kg is

- (A) 10.20
- (B) 17.05
- (C) 21.98
- (D) 25.07

Q.42 A chiller working on mechanical vapour compression refrigeration system (COP = 4.5) is used for cooling 12500 kg of fresh cow milk (c<sub>p</sub> = 3.8 kJ kg<sup>-1</sup> K<sup>-1</sup>) from 30 °C to 4 °C in 3 hours. Assuming ideal compression process, the power consumed by the electric motor in kW and the tonnage of refrigeration (TR), respectively are

(A) 25.4 and 32.5

(B) 25.4 and 114.3

(C) 32.5 and 25.4

(D) 114.3 and 25.4

Q.43 Two streams of air with the following conditions are adiabatically mixed:

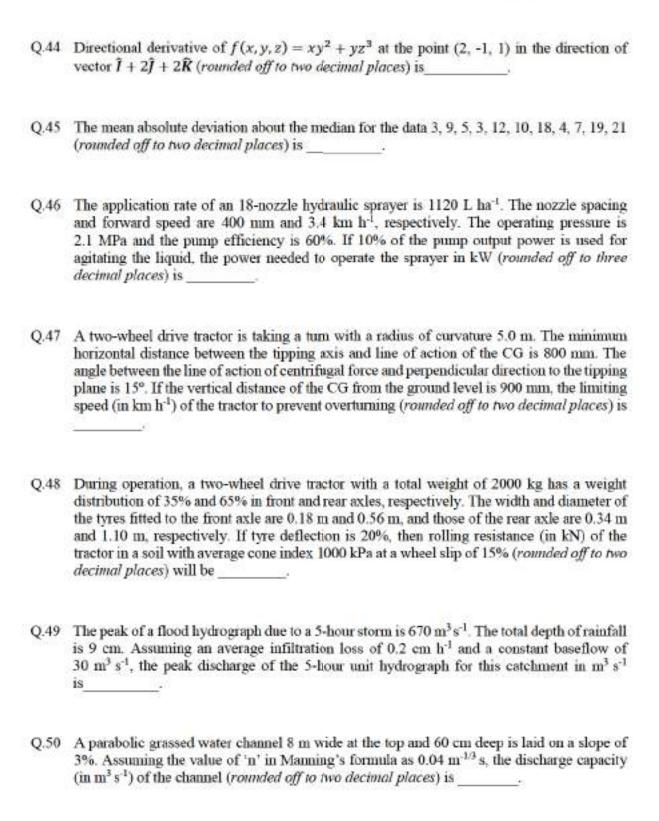

Stream	Flow rate, kg dry air h -1	Dry bulb temperature, °C	Absolute humidity, g water vapour (kg dry air) <sup>-1</sup>
Fresh air	727	35	27
Recycled air	1020	55	40

Latent heat of vapourization of water at 0 °C = 2501 kJ kg<sup>-1</sup> Specific heat capacity of dry air = 1.005 kJ kg<sup>-1</sup> K<sup>-1</sup> Specific heat capacity of water vapour = 1,880 kJ kg<sup>-1</sup> K<sup>-1</sup>

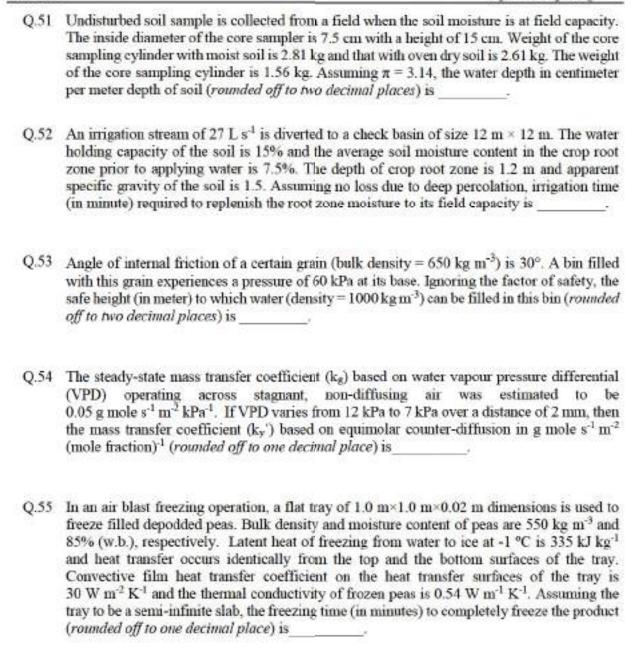

Using above values, the dry bulb temperature and the absolute humidity of the mixed air in °C and g water vapour (kg dry air) 1, respectively are

- (A) 43 and 30
- (B) 44 and 31
- (C) 45 and 33
- (D) 46 and 35.
